An admissible model is not yet an explanation

Private identity sheet. The journal's current preparation page says a title page is not required for anonymous review. This sheet is not claimed as a submission file.

Author

Drew Lamarr Arrowood. Affiliation, email, and ORCID: pending confirmation. None are invented.

Funding and competing interests

Not confirmed. The journal's final-version template says to write "None to declare" when there is nothing to declare. That sentence is not used here, because the facts are unknown rather than known to be absent.

Assistance

Grok Bot, a Cursor cloud agent, generated draft text beyond spelling checks. No tool version is recorded. The assistant is not an author. Human verification is pending. The review manuscript records this in a footnote, because anonymous review omits acknowledgements while the publisher's AI guidance mentions an acknowledgements section or a footnote. The conflict is unresolved.

Overlap

The finite canonical equivalence is the same mathematics as in other public drafts by the same author, including drafts aimed at Erkenntnis and at philosophy of physics. This manuscript is not an independent study produced by reformatting. It asks when an admissibility constraint

on a model would be an explanation of a target. No submission has been made. Public drafts mean anonymity is not guaranteed.
