What an intervention test would have to show

Drew Lamarr Arrowood
Affiliation, email, and ORCID: pending confirmation. None are invented.
For a temporarily unaffiliated author the journal records city and country rather than an email unless one is requested. City and country are also pending, and are not invented.

Declarations

Funding. Not confirmed. No funder or grant number is invented, and the absence of funding is not declared.

Competing interests. Not confirmed. Financial and non-financial interests have not been checked. "The authors declare that they have no competing interests" is not used.

Ethics approval and consent. Not applicable to this theoretical manuscript. No human subjects, animals, or personal data were involved. This sentence records the author's present understanding, not a formal ethics review.

Data, materials, and code. The finite claims are the same ones as in the author's public technical note. No new dataset was created. Tables used by the known-board calculation live in that public repository. No dataset DOI is recorded. No separate code was written for this manuscript.

Authors' contributions. Drew Lamarr Arrowood is the responsible author. Grok Bot, a Cursor cloud agent, drafted the text on 8 November 2026, beyond copy editing. The model version is not recorded. Verification is pending. The agent is not an author. A use statement also appears in the review manuscript, without the author's name.

Anonymity

The review file omits the author's name and does not cite the public note by name, because that citation would identify him. The journal asks authors to avoid self-citations that reveal identity. This file is the separate title page the guidelines request. Because related drafts are already public, double-blind anonymity is not claimed. The manuscript is an alternative adaptation of those drafts, not an independent study. No submission has been made.
