A Computer without a First Step?

Title page for a review draft

Draft, 8 November 2026. Not submitted. Not prepared as a submission.

Author

Drew Lamarr Arrowood.

Affiliation: pending confirmation by the author. No institution, city, or country is invented here.

Corresponding email: pending confirmation by the author. None is invented here.

ORCID: not recorded.

The review manuscript omits this name from its text and from its PDF metadata. Related drafts by the same author are already public, including a technical note, a Foundations-style draft, and a Synthese-style draft. This page does not claim that anonymity is secure.

Acknowledgements

Pending the author's text. None are invented here.

Statements and declarations

Funding. Not yet confirmed by the author. No funding statement should be inferred.

Competing interests. Not yet confirmed by the author. No declaration of the absence of a conflict should be inferred.

Use of generative assistance. Drafting of the review manuscript, including the organization of the argument, the invented scenes, and the wording of the appendix, was assisted by Grok Bot, a Cursor cloud agent. The assistance was not limited to copy editing. It included generative composition of the argument. The assistant is not an author. The underlying model and provider, beyond the description just given, are not recorded here. The human author remains responsible for a final text. Author verification of this draft is pending and is not claimed here.

Data and code. The mathematical statements are taken from an unpublished technical note by Drew Lamarr Arrowood. A reviewer link with the author's name masked has not been prepared. This page does not invent one.

Relation to other drafts

The finite canonical-lift equivalence and the computational-basis witness also appear in other unpublished drafts by the same author, written for other readerships. This manuscript's claim is about computational implementation and modal warrant. It is not offered as a unique statement of the mathematics, and no submission of any draft is requested or recorded.
